

Alameen Azad

Engineering Lead · Full-Stack & Backend

Sulaymaniyah, Iraq · remote (UTC+3) · Alameen.Azad@proton.me · linkedin.com/in/alameen-azad · github.com/AlameenAzad · byalameen.com

SUMMARY

Engineering lead with 7+ years of experience shipping web platforms. Led a team of 8 engineers delivering customer-facing products and SAP-integrated internal systems at Moonline Travel, and lead a team of 4 on the Förderscouting-Plattform at K&C while shipping backend code for Informa's Partnering One. Core stack: Node.js, Vue/Nuxt, PostgreSQL and Docker. I care about clean REST APIs, maintainable architecture and self-hosted delivery infrastructure, and I use AI-assisted development to ship faster without lowering quality.

EXPERIENCE

K&C (Krusche & Company) — full-time, remote Feb 2022 – Present
Senior Software Engineer (Backend) — outsourced to Informa, Partnering One Aug 2022 – Present

- Ship backend code for Partnering One, a collaborative business platform: design and implement scalable services, integrate REST APIs, optimize database performance and ensure data security, working with cross-functional teams.

Team Lead & Full-Stack Developer — Förderscouting-Plattform (Nordfriesland) Feb 2022 – Present

- Lead a team of 4 while developing hands-on, running Agile Scrum with Vue.js on the front end and Node.js/PostgreSQL on the back end.
- Partner with stakeholders to deliver a scalable, REST-API-driven platform that streamlines municipal funding processes.

Branch Manager — Sulaymaniyah office (branch since closed) May 2023 – Aug 2026

- Ran the branch end to end (lease, setup, equipment procurement) alongside my engineering roles, and built the local team.
- Led technical and HR recruiting with CleverStaff and LinkedIn, sourcing and onboarding engineers.

Moonline Travel and Trade Mar 2019 – Aug 2022

Software Development Director Mar 2022 – Aug 2022

Lead Developer — team of 8 engineers Jan 2021 – Mar 2022

Full-Stack Developer Mar 2019 – Jan 2021

- Led 8 engineers shipping customer-facing products (Booking Advisors, Visa Advisors) and the company's internal tooling.
- Built internal tools integrated closely with SAP, working with SAP partners: CRM, invoice data-entry portal, project management and an HR system. They let the company log data, invoice customers and track money more closely, and replaced third-party tools the company was paying for.
- Rebuilt Booking Advisors from a hand-maintained HTML/CSS/JS codebase into Vue 2 + Quasar (PWA), structured so any team member could maintain it and ship a fix to production the same day.
- Built an internal password vault on Ubuntu using libsodium (Halite) encryption, with full user-action logging, a login idle lock, and Google sign-in with two-step verification.

OWN PRODUCTS

Zerly Real-time gold price tracker and portfolio manager. zerly.byalameen.com
Keptwish Invite-only family wishlist app with private Family Circles. keptwish.byalameen.com
Nooks Multi-tenant digital menu and memory-wall platform for local cafés.
Aion Open-source CLI that syncs Tempo (Jira) time entries to Dyce. github.com/AlameenAzad/aion

SKILLS

Back end Node.js, TypeScript, Express, PostgreSQL, REST API design, PHP (Laravel)
Front end Vue 2/3, Nuxt, Quasar, JavaScript, HTML, CSS
Infrastructure Docker, CI/CD, reverse proxying, Linux (Ubuntu), AWS

EDUCATION & LANGUAGES

Education BSc Information Technology, The American University of Iraq, Sulaimani (2014 – 2019)

Languages Arabic (native), English (full professional), Kurdish (professional working)
